

Pro-Trap™ Monitoring Solutions

Designed for Monitoring. Built for Responsible Pest Management.

Built with Intention

Pro-Trap™ Monitoring Solutions were developed to support the realities of pest management, where performance, monitoring, and responsibility all matter.

Built for real-world service environments, Pro-Trap supports intentional monitoring and informed decision-making through two purpose-built formats:

Mouse & Insect Glue Boards

Designed for flexible monitoring across rodent and insect applications.

4×10 Multiple Catch Inserts

Sized to fit industry-standard multiple catch devices and adaptable for flat or folded monitoring when needed.

Every Pro-Trap format is designed to reflect the standards expected in the field, not only in results, but in how tools are selected, placed, monitored, and removed.

pest management solutions.

Designed for the Field

Effective pest management tools do more than perform. They support informed decision-making. Pro-Trap Monitoring Solutions are designed to perform consistently throughout the service interval, remain stable in real-world field conditions, and maintain structural integrity even in damp or challenging environments. From placement to monitoring to documentation, Pro-Trap supports a more thoughtful and disciplined approach to pest monitoring.

The result is a monitoring solution that reflects responsibility at every stage of the service process, not just at capture.

Responsibility Matters

Responsible pest management carries an obligation to customers, environments, and the industry as a whole. **That's why Pro-Trap is built around a simple principle:**

EVERY TRAP SHOULD HAVE A REASON, A RECORD, AND A RESULT.

Reason

Intentional placement
based on conditions
and need

Record

Monitoring and
documentation that
inform decisions

Result

Outcomes that support
effective, responsible
pest management

Designed to Support Responsible Use

Pro-Trap Monitoring Solutions are designed to support monitoring-focused pest management programs, not shortcuts. Used thoughtfully, they provide valuable insight into pest activity, changing conditions, and trends that support informed control decisions.

Manufactured with Accountability

Manufactured in the USA, Pro-Trap reflects decades of glue manufacturing expertise and a specialized focus on glue-based pest management products. That focus supports consistent quality, reliable supply, and disciplined manufacturing standards from raw materials to finished product.
